GENERAL MATHEMATICS

by SCHORLING AND REEVE is a new combined course for the first year in high school. It shows the interrelation of algebra, geometry, trigonometry, arithmetic and practical drawing in a way that facilitates greatly the study of each.

ALGEBRA

HAWKES, LUBY AND TOUTON clothe the dry bones of mathematics with flesh and blood. An algebra with pictures, easily taught, readily understood, and giving the pupil an unusually thorough grounding in the fundamentals.

GEOMETRY

Over eighty per cent of the geometries used in American schools are WENTWORTH-SMITH. It would be difficult to find a teacher who is unfamiliar with this series.
